EXPERIMENT 3: HUB and SWITCH (Comparison)

AIM:

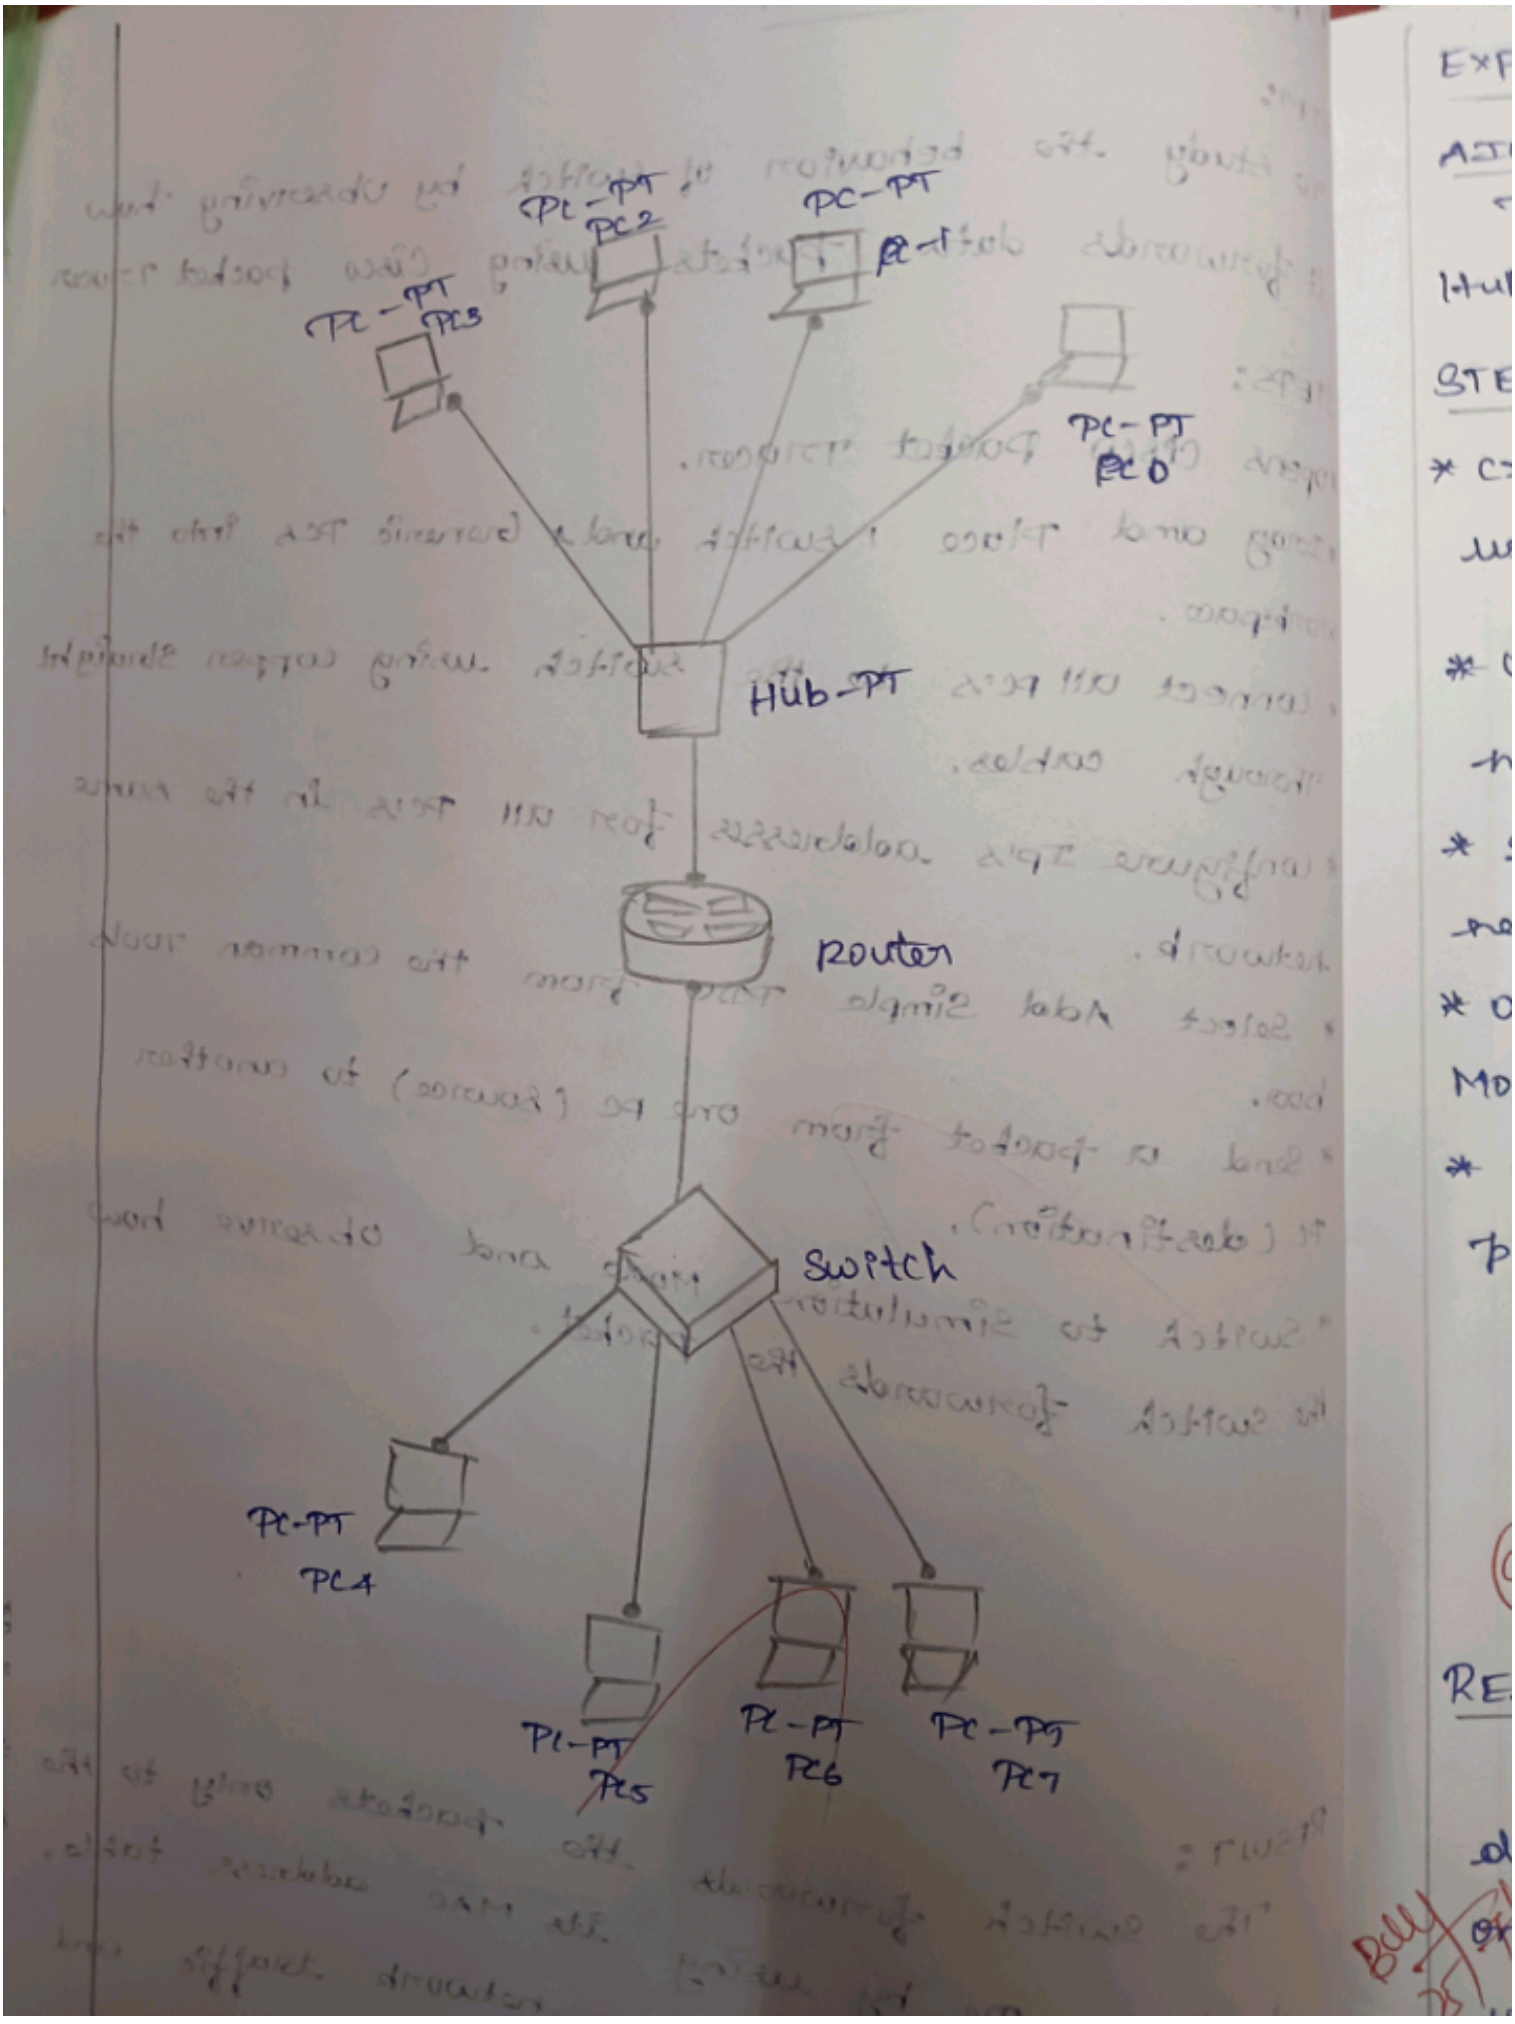

To compare the packet forwarding behavior of a Hub and switch using cisco packet Tracer.

STEPS:

* Create one network using a Hub and another using a switch, each connected to 4 PC's.
* Configure IP addresses for all PC's in both networks.
* Send a simple PDU between two PC's in each network.
* Observe packet transmission in simulation Mode.
* Compare how the Hub and switch forward packets.

RESULT:

The Hub broadcasts packets to all connected devices, whereas the switch forwards packets only to the intended destination. Therfore, the switch provides better performance, reduced network traffic, and improved efficiency compared to the Hub.
